

ReactJs Project

PROJECT NAME : Chat Room

DESCRIPTION : This project is all about creating a website with the below functionalities.

Develop a website with user authentication page with mobile verification(OTP) enabled. On successful login, users should be able to create\show existing Chat room with the registered friend's circle.

Add functionality to search friends from facebook\linkedin account too(social media integration).

Create a login page & create 2 users(Admin & user).

Below are the functionalities to be accomplished

Roles - *Admin & End user.*

End user - Once they logged in with the User login, can view the chat room icon & a list of friends registered. Once a chat room is created, a link should be generated for the chat room with which other friends can join. Also add video functionality in the Chat room.

Admin : Can view the list of users registered and manage them.
Admin must have access to get a analytical data of the chatroom registered, along with the time frame.

Project Output : Chatroom website should be developed & showcased before the project end date.

Project Start date : 12/12/2020

Project submission date: 27/12/2020
